STONY BROOK MATH CLUB

Faculty talk

with Yongquan Zhang

"Curves on surfaces"

Curves on surfaces reveal a lot of geometric and topological information, not just about a single surface, but also about their deformations. In this talk, starting from the torus (the simplest nontrivial example), we will try to explore the many ways of studying curves and discuss connections with many areas of mathematics.

THURSDAY, NOVEMBER 30, 2023
7:00–8:00 PM IN P-131, MATH TOWER
